#### **Earthquake, Lake Pillsbury, Lake County, 11 miles SE of Lake Pillsbury**

On 08/09/16 at 1957 hours, a verified Magnitude (M) 5.1 earthquake occurred near Lake Pillsbury, Lake County, in a rural area.

- There are no reports of damage or injuries from Lake County.
- Per the Department of Water Resources (DWR), no infrastructure inspections are warranted.

Per the Cal OES EQTP DO at 2046 hours:

- At approximately 1957 on 08/09/16, a M5.1 earthquake struck approximately 20 miles NE of Upper Lake, in Lake County.
- Two aftershocks have been recorded: a M2.7 at approximately 2008 hours and a M3.0 at approximately 2024 hours.
- The epicenter was near the Bear Creek campground in Lake County.
- Per the USGS Northern California Duty Seismologist, the fault line is unknown and will not be determined until further analysis is conducted via an incident report. The duty seismologist stated that further aftershocks can be expected for this event. The probability of a M5 or stronger aftershock occurring in the next 7 days is approximately 11%. Earthquakes larger than the main shock can occur, with a probability of 5-10% over the next 7 days. Approximately 3-15 aftershocks can be expected over the next 7 days smaller than M 5.
- Cal OES EQTO DO is monitoring.

[http://www.wrh.noaa.gov/sto/brief/wwa\\_bc\\_cal.php](http://www.wrh.noaa.gov/sto/brief/wwa_bc_cal.php)

# **WEATHER SYNOPSIS BY REGION**

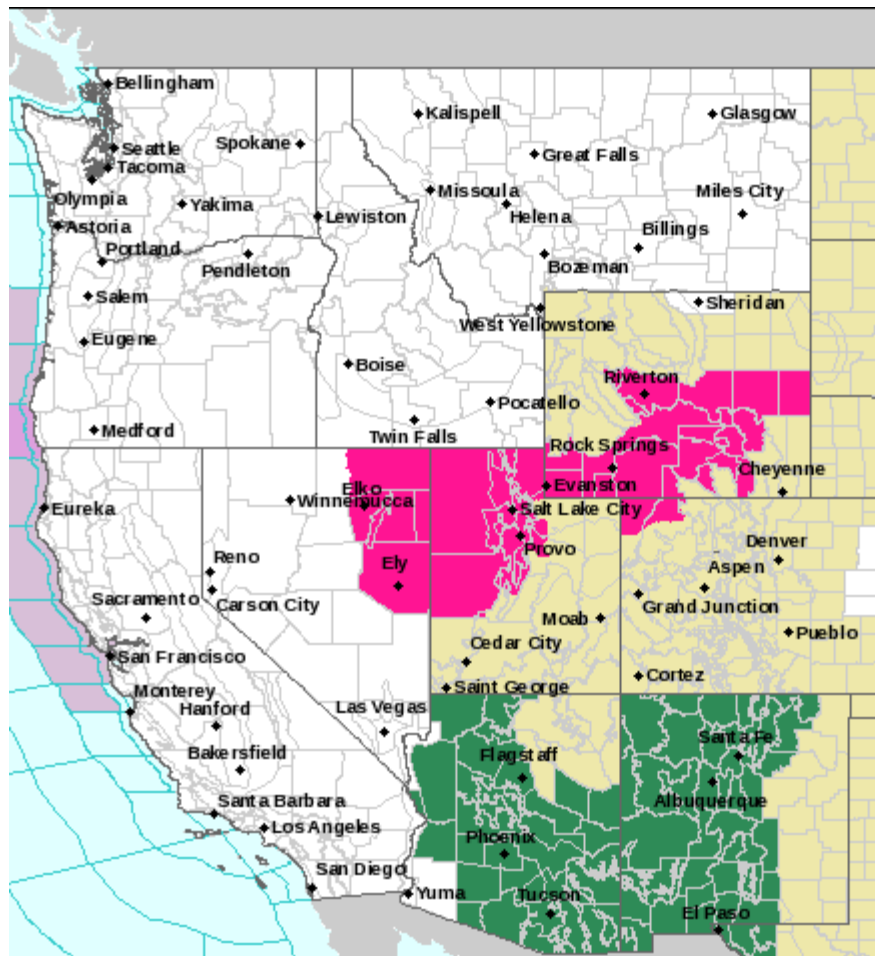

## **NORTHERN CALIFORNIA**

A low pressure trough will continue to be over the region today and Wednesday. Some afternoon cumulus cloud development is expected over the northern mountains in particular, but there will be only a slight chance that any isolated showers or thunderstorms will develop out of this pattern today and Wednesday. Starting Thursday a high pressure ridge will move over the region and strengthen for a few days. Afternoon high temperatures will rise to around 5 degrees above seasonal normals for the inland areas. Friday and Saturday look like the warmest days coming up. By the end of the weekend, however, another trough is expected to arrive along the coast and temperatures will be slightly cooler again with a very slight chance of isolated afternoon and evening thunderstorms returning again near the Oregon border. The marine layer is likely to become thinner under the strengthening high which will allow any overnight low clouds and patchy fog that form to dissipate for at least several afternoon hours in most areas. The marine layer may become a bit deeper again Sunday and Monday under the trough. Overnight relative humidity (RH) recovery will be on a declining trend the rest of the week with nighttime thermal belt conditions likely returning to many mountain areas. Afternoon wind speeds will be very seasonable with areas near and east of the Cascade-Sierra crest gusting to around 25-30 mph each day and typical, rather light terrain-driven on shore/up slope/up valley conditions elsewhere. The northern Sacramento Valley will have a few days with relatively light overnight northerly winds that will gust up to 20-25 mph for a few hours.

## **SOUTHERN CALIFORNIA**

The trough which has lingered across the area the past few days will finally move inland Wednesday, which will allow warmer weather to return toward the end of the week. But today, expect another morning of widespread marine layer coverage with breezy conditions returning to areas this afternoon in and near the Antelope Valley. Temperatures to be a bit below normal today and Wednesday with highs ranging from the 70s along the coast to the upper 80s to lower 90s in the valleys to 105 in the desert. West winds may be just a bit stronger this afternoon across the Kern County Mountains, the Antelope Valley and Banning Pass where wind speeds of 15-25 mph with gusts to 35 mph will be possible. Minimum RH will continue to be very low across the Inyo National Forest and the desert adjacent areas of the Angeles National Forest. These areas will generally see RH fall into the 5-9% range for 6-8 hours this afternoon. Wednesday and Thursday, expect less windy weather as the trough moves east and high pressure rebuilds over the area. Friday, temperatures will leap upward 5-10 degrees as high pressure and very weak offshore flow develop over Southern California. By the weekend, valley high temperatures will be in the upper 90s to near 100. Minimum RH will drop into the 8-15% over a wide area this weekend due to dry and subsident airmass, but recovery should be good each night due to weak winds and clear skies. One or two thunderstorms may occur right along the Colorado River late this week, but the rest of the area will remain sunny and dry. Long range models indicate cooler weather may return early next week.
